Model Specific

SELF-CONTAINED / RESPIRATOR FIT TEST - SCBA

COURSE OVERVIEW

This course was designed for the Member companies of the IEC. Participants view a 25 minute video and answer questions based on the information from the video.

We offer testing in both SCOTT and DRAEGER systems depending on contractor requirements. A quantitative fit-test using a PortaCount machine determines proper mask size and user's ability to don and doff the mask.

The practical portion of this training has the worker donning the backpack equipment where they are shown how to clear the air using the purge. The instructor ensures the worker knows what actions to take in the event that the alarm system indicates low air supply in the backpack. Low air alarms are demonstrated.

PROGRAM CONTENT

- Determine proper mask size and fit
- Practical demonstration of donning and doffing the equipment
- What to do in the event of alarm condition

TARGET AUDIENCE

Any person required to use self-contained breathing apparatus.

PREREQUISITES

N/A

TRAINING TIME (hours):

1-2 hours

RECERTIFICATION

24 months
